

*quadrivalvis*, in addition to those at LAF, are being distributed to GA, GH, IBE, KNK, LSU, LTU, MICH, MO, NATC, NCU, NLU, NO, NY, SMU, TAES, US, and VDB.

We thank John W. Thieret for suggesting that an attempt be made to relocate *T. quadrivalvis* in Louisiana, and Debra Waters for participating in the field work.—William D. Reese and Garrie P. Landry, Biology Department, University of Southwestern Louisiana, Lafayette, LA 70504, U.S.A.

*CAMPANULA RAPUNCULOIDES* (CAMPANULACEAE) NEW TO TEXAS—On June 9, 1984 I collected a single plant of *Campanula rapunculoides* L. (Brown 7507, SMU) in a woodland of *Quercus glaucoides* on a rocky limestone slope above the Sabinal River in Lost Maples State Park north of Vanderpool in Bandera County. This native of Europe is reported by Fernald (FERNALD, Gray's manual, 1950) to be naturalized in eastern North America south to Indiana, Illinois, and Missouri.—Larry E. Brown, Houston Community College, 726 Horncastle St. Channelview, TX 77530, U.S.A.

NOTES ON TWO TEXAS PLANTS—*JUNCUS CAPITATUS* Weigel (Juncaceae) was first reported for Texas by Gould in 1962 [1963] from Walker County. This collection by S. R. Warner was annotated as a new species (COTYPE: SMU) by Tharp & Barkley. A literature search indicates the name was never published. Since then the species has been determined as *J. capitatus*—an introduction from the Old World—now scattered over the southern United States. Two new locations are here reported for the state.

Collection data: Walker Co.: Rock Springs Church, 3 May 1944, S. R. Warner s.n. (SMU). Bandera Co.: first low water crossing on FM 187 N of Utopia ca 5 mi S of Vanderpool, 2 May 1984, T. M. Keeney 3876 (SMU, UVST); same locality, 6 May 1984,
